

Indo-NVDA is a cost effective and customized screen reading software that enables persons with visual impairment to access text that is displayed on the computer through speech synthesizer or Electronic Braille Displays.

With Indo- NVDA, users can easily access applications like web browsers, email and office suite. Users can also access content in 43 regional languages with the built-in e-speak speech synthesizer. Indo-NVDA converts any laptop or desktop computer into a reading and writing device for persons with print disabilities. It enables them to read text is format written by rest of the world and also enables them to write in format readable by all.

It enables users to choose from 14 premium voices in 10 different Indian Languages including English (Indian, British, American, Hindi, Bhojpuri, Bengali, Kannada, Tamil, Telugu and Marathi).
